Intra Railway Safety Audit inspection of GUNA-Bina section of Bhopal Division by SAG team of WCR on 27.06.2025

HAG/SAG Officers accompanying PCSO/WCR:

S.N.	Name	Designation
1.	Shri Jag Ram Meena	CEDE/WCR
2.	Shri V.K.Shrivastava	CSE /WCR
3.	Shri Rajesh Bajpai	CTPM/WCR
4.	Shri Amitoj Ballabh	CMPE (D&DM)/WCR
5.	Shri Ateen Kumar Tomar	CE(TMC) / WCR

Officers of HQ Safety WCR:

S.N.	Name	Designation
1.	Shri P.Nimbalkar	Dy. CSO (Mech)
2.	Shri Ankit Singhai	SSO (S&T)

Divisional officers were present during the inspection:

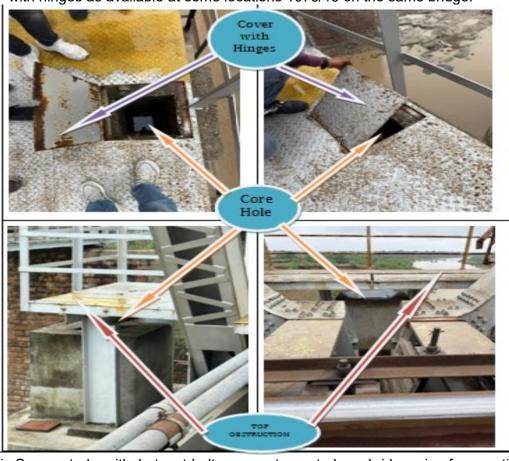

S.N.	Name	Designation
1.	Shri Yogendra Baghel	ADRM (O&I)/BPL
2.	Shri V S Gautam	Sr DSO/BPL
3.	Shri Sachin R Sharma	Sr DEE/TRO/BPL
4.	Shri Amit Patel	Sr DEE/TRD/BPL
5.	Shri N S Lodhi	Sr DEN/N/BPL
6.	Shri P S Raguwanshi	Sr DME/Freight/BPL
7.	ShriRao Abhishek Singh	Sr DSTE/Signal/BPL
8.	Dr. Pramod Pandeet Jadhav	DOM/Coaching/BPL
9.	Shri Vikash Jangid	DSTE/BINA
10.	Shri Ashish Jhariya	DME/BINA
11.	Shri Mamlesh Yadav	ADSO/BPL
12.	Shri Sunil Kumar Chaturvedi	ADEE/G/BPL
13.	Ravindra Kumar Kailashiya	AXEN/Bridge Line/BPL
14.	Shri Rajani Kant Shekhar	ADEN/GUNA
15.	Shri Shailendra Gupta	ADSTE/GUNA
16.	Shri Mayank Jain	ADEN/BINA

				fitting	are ii	n good	d cond	lition.					
	 Guard rail sleepers and fitting are in good condition. Danger level marking needs re-painting on both UP and DN route. 												

- Pitching provided around Abutments is found in good condition.
- Ballast wall provided in approaches may be planned widening and in alignment with return wall so that in both approaches additional ballast provision and space for maintenance can be created.
- 7 nos of hook bolts found loose must be tightened.
- 12 nos of rubber pad were crushed needs to be replaced.

i. Core holes do exist on bridge pier but covered from TOP & not available ready to use. Top obstruction on core holes i.e. platform should have cover openings with hinges as available at some locations 1075/13 on the same bridge.

DRM/BPL

ii. Spare studs with but nut-bolts are not grouted on bridge pier for erection of emergency masts.

1.3	C-bonds between guard rail and track are missing (UP Road). All other bonds also need to be verified.					
1.4	The girder bridge on DN Road is old and lacks provision for spare mast erection in emergency conditions, STUDS may be grouted.					
1.5	Girder-to-girder continuity Bonds are not available at location 1075/7 and 1075/26 on both UP & DN lines.					
1.6	to be satisfactory. However, the measurement through tone-tes quad cable & especially, its TS	e accompany iting using T SF joints whi	t the bridge to TPC was tested & found ying staff was advised to carry-out loss-MS Kit so as to ascertain the health of ch reportedly have shorter codal life of having a specified codal life of 30 years. Relay Room was inspected. Observations noted were as mentioned hereunder: 1) 3 Nos. of AC machines were found installed in Relay Room. Further, MCBs should be provided in their connection for over-current protection. Automatic switching arrangement needs to be installed on the outside wall of Relay Room. 2) Reliance-make AFDAS was functional in Relay Room & other S&T Rooms. It was tested wherein it was found working satisfactorily. However, since it was not conforming to RDSO specifications, it is thus required to be replaced with a system conforming to the latest RDSO specifications. 3) Fuse Auto Changeover System (FACS) has not been installed at this station. It is to be arranged at the earliest & installed outside Relay Room, preferably in ESM Duty Room. 4) ELD for monitoring health of quad cables is to be arranged. Relay Room opening was being monitored properly through Data-logger. However, for easy identification of statusof Relay Room opening in LED Matrix Display of Data-logger, the leftmost LED on top row is to be earmarked at all stations. 3.24 On platform circulating area Half case DRM/BPL location of S&T on platform no-1 is buried in soil of platform needs to lift up properly. 3.25 On platform circulating area many half cut poles of electricity located on platform no-DRM/BPL 1 need to be removed from platform and cable should be connected under ground for public safety. 3.26 DRM/BPL Sepeage found in roof of relay room.

0.1	Gate Working Rule found available which was issued on 05.01.2022& Date of enforcement on 20.01.2023.						
6.5	Drinking water facility and Hand Pump not provided at this LC.			DRM/BPL			
6.6	Safety Equipment's found as per list. 10 detonators of the year 2019 available at LC					DRM/BPL	
		•	•		by division after te		
6.7		under construct	ion at gat	e. However the	e work has been s	stopped due to	DRM/BPL
	land issues.						

6.8	Window glass of the Gateman Gumti is broken and cannot be closed. Rain water comes inside the gumti from window.	DRM/BPL
6.9	Rain water comes on Gate boom operational panel so it has been covered by polythene. Proper shed over the Gate boom operational panel is required to protect it from rain water.	DRM/BPL
6.10	 Stop board provided on gate boom was not retro reflective type. A toilet has been constructed at the gate but the water facility is not available. This renders the facility unusable and causes inconvenience to the staff posted at the gate. 	DRM/BPL
6.11	There is seepage in the Gate Relay Room, due to which relays have been temporarily covered with polythene to protect them from moisture. Proper waterproofing measures be undertaken immediately to rectify the issue.	DRM/BPL
6.12	Street light was not working due to cable cut, need attention.	DRM/BPL
6.13	Non-standard height gauge needs to be replaced with RDSO design sturdy type as per the latest correction slip of ACTM required.	DRM/BPL
6.14	Bituminous road has been provided between the gate posts and at both approaches of Level crossing. Condition of road surface is satisfactory and speed breakers provided as per standard profile. Non-standard height gauge needs to be replaced with RDSO design sturdy type as per the latest correction slip of ACTM required. Height Gauge clearance from Road Surface: DN side: 4.78 M UP Side: 4.78M Condition of Track: Overall condition of track was found satisfactory.	DRM/BPL

Track Parameter	DN road	UP road
01. Gauge	0 to +2mm	-1to +3mm
02. XL	5L to 2L	4R
03.Clearance of check rail		
LH	51-52mm	54mm
RH	52-54mm	53-54mm

LHS BOXES were already inserted work of approach road in progress. Barricading needs to be strengthen at DN road side and towards track side there is possibility of ballast slippage hence proper barricading needs to be done.

6.15 Point No. 115A was inspected & subjected to 5-mm obstruction test. The readings measured as well as other details & deficiencies were as mentioned hereunder:

Poin	t No.	. Voltage Current				
		Initial	Obstruct ion	1		Obstruct ion
101B	N-R	107	97	2.2	1.8	4.2
101B	R-N	107	96	2.2	1.9	4.1

- 1) Point machine has been installed on LH side which is not in conformity with item No. 19.3.1(a) of IRSEM which clearly lays down that "Normally the machine shall be installed beside the close switch leading to high-speed movements clear of all infringements." Accordingly, this point machine is required to be shifted to RH side for preventing the possibility of outside interference through foot-pressing of locking rod when the point is flashing due to any obstruction between its Tongue &Stock Rails.
- 2) Opening: LH 115mm; RH 118mm.
- 3) WJR timing was 11 sec, which was within permissible limit.
- 4) Availability of NX switch in crank-handle circuit was checked & found to be working satisfactorily.
- 5) Track locking was tested and found to be effective.

It is not desirable to lay any turn-out over level crossing, as difficulty is noticed in maintaining track circuits at LC area. Some instructions were issued long back by Rly Board which prohibited laying of turn-outs at such locations. This may be kept in view while planning any work in future involving yard-remodeling.

7.0	KXB Station:	
7.1	On PF-1 (towards rail side), LT cables are hanging — proper securing required.	DRM/BPL
7.2	Structure Bond need to be put underground over platform area.	DRM/BPL
8.0	ART/BINA :-
